

Commonly Used Tags/Filters

What are tags in CKAN?

Tags, such as 'statistics' or 'climate change', are used to group datasets into similar types to make them easier to find. Generally, tags can be one of two types: fixed list (typically relevant technical jargon) or free-form strings.

In our data catalogue, we have implemented the free-form string approach, as this provides the end-user with the maximum amount of flexibility to catalogue their important documents to suit their needs.

Sample tags names include

Tag names
Hydrology
Salinity
Environment
Climate Change
AWRC
